

AutoGoni™

The Automatic Goniometer

The goniometer is a type of protractor used by Physical Therapists to measure angles of body joints.

The Problem

It is cumbersome to use both hands to move the goniometer while simultaneously reading and recording the results

AutoGoni™

The Automatic Goniometer

Digital Goniometers exist...
But you must still read the
results and write it down for
each measurement...

Wasted Time!

What if there was a better way?

- Automatically detects the max angle achieved per measurement
- Up to 6 measurements visible on the screen at a time
- Up to 255 measurements can be stored in the device to either be read through externally or transferred digitally over the

AutoGoni™

The Automatic Goniometer

Other Functionality?

- Sync to computer program to automatically track and display progress over multiple session's measurements
- Real-time data acquisition of angle vs. time, speed, etc.
- And anything else!
